

## Lead-Based Paint Hazard Control Program

San Antonio's Lead-Based Paint Hazard Control Program (L.B.P.H.C.P.), funded by the U.S. Department of Housing and Urban Development (HUD), is offering financial assistance to owners of residential properties to assist with the control of lead-based paint hazards. The program is designed to protect children, ages six and under, identified as having elevated blood lead levels associated with lead-based paint hazards in their homes. The City is now accepting applications from property owners for financial assistance to improve housing for tenants and owners.

If you are interested, please call to request the application brochure. When we receive the application we will schedule a home visit to determine your eligibility. If your home meets our eligibility criteria, it will be given a ranking according to the following: the location of your home; year of construction; children 6 years old and younger (residing in the home); elevated blood lead levels; level of lead hazards; and owner-occupancy.

The extent of the work and the approximate time required to accomplish the work will be explained to you in detail. The projects will be chosen on the basis of priority ranking and date of application so, please complete and return the application **as soon as possible.**
